

When patients are
back in business,
your staff is, too

Using Cerenia injectable perioperatively is good for dogs—and your practice

Benefits to your patients

Help ease a dog's recovery by adding Cerenia to your perioperative protocol, to prevent vomiting and enable a quick return to normal feeding.¹

Benefits to your practice

A third of practice owners reported the impact of cleaning up after patients that vomit. With Cerenia, less cleaning can mean more time for patient care, leading to greater dog owner satisfaction.^{2,3}

“Happier patients, happier clients, a happier team!”

– Dr. Sue Ettinger, DVM, DACVIM (oncology)

An expert panel recommends the use of Cerenia.

IMPORTANT SAFETY INFORMATION: Use Cerenia Injectable subcutaneously for acute vomiting in dogs 2 to 4 months of age or either subcutaneously or intravenously in dogs 4 months of age and older. Safe use has not been evaluated in dogs with gastrointestinal obstruction, or those that have ingested toxins. Use with caution in dogs with hepatic dysfunction. Pain and vocalization upon injection is a common side effect. In people, topical exposure may elicit localized allergic skin reactions, and repeated or prolonged exposure may lead to skin sensitization. **Please see full Prescribing Information.**
